

5 KNOWLEDGE WORK DOMAINS

- **Knowledge Management** — Organize files, query documents, surface case trends
- **Administrative Support** — Email drafting, calendar management, meeting notes
- **Writing & Outreach** — Recruitment campaigns, LOIs, proposals, event invites
- **Research** — RFP summarization, evidence synthesis, program literature
- **Analysis** — Data cleaning, outcome trends, survey/feedback analysis

6-STEP HANDS-ON PROCESS

1. Choose your task (from your own work or the five domains)
2. Confirm it is AI-eligible (language-based, information-intensive)
3. Open your AI tool (ChatGPT, Gemini, Copilot, or Claude)
4. Write a specific prompt (include context, audience, tone, desired output)
5. Evaluate and iterate (refine your prompt based on the output)
6. Document your result (save your best prompt and output)

TASK ELIGIBILITY TEST

Ask: Is this task language-based and information-intensive?

YES → Emails, reports, case notes, proposals, data summaries

NO → Physical setup, crisis counseling, in-person facilitation

START FREE PRICING STRATEGY

- **Free:** Gemini Free, Copilot Free, ChatGPT Free (\$0)
- **Consumer:** Google AI Pro ~\$20/mo | M365 ~\$10–\$13/mo
- **Premium:** ~\$14–\$22/user/mo
- **Rule:** Start Free → Learn → Upgrade Only on Demonstrated Value

Check what you already have — Copilot and Gemini are built into M365 and Google Workspace.

AI TERMINOLOGY QUICK REFERENCE

- **AI:** Broad field (since 1950) — machines performing tasks that typically require human intelligence
- **Machine Learning:** Systems that learn from data patterns rather than explicit programming
- **Generative AI:** AI that creates new text, images, or content (ChatGPT, Gemini, etc.)
- **LLM (Large Language Model):** The engine behind tools like ChatGPT — trained on vast text data
- **Prompt:** Your instruction or question to the AI tool
- **Hallucination:** When AI generates confident-sounding but factually incorrect information
- **Transformer:** The 2017 architecture breakthrough that made modern Generative AI possible

KEY RULES TO REMEMBER

- AI is a 75-year-old field — not new, not magic
- AI does not think or reason — it identifies patterns in data
- **68% of AI citations come from just 15 domains** — always verify
- Patience and iteration are the most important AI skills
- Choose tools that fit your existing ecosystem (Google or Microsoft)
- AI is a force multiplier for knowledge work — not a replacement for human judgment
- **Never enter PII into free-tier AI tools** — anonymize first
- Ethics: Bias, Transparency, Human Oversight, Verification (see Appendix)
